Assembly Overview

1 On-site adjustments.

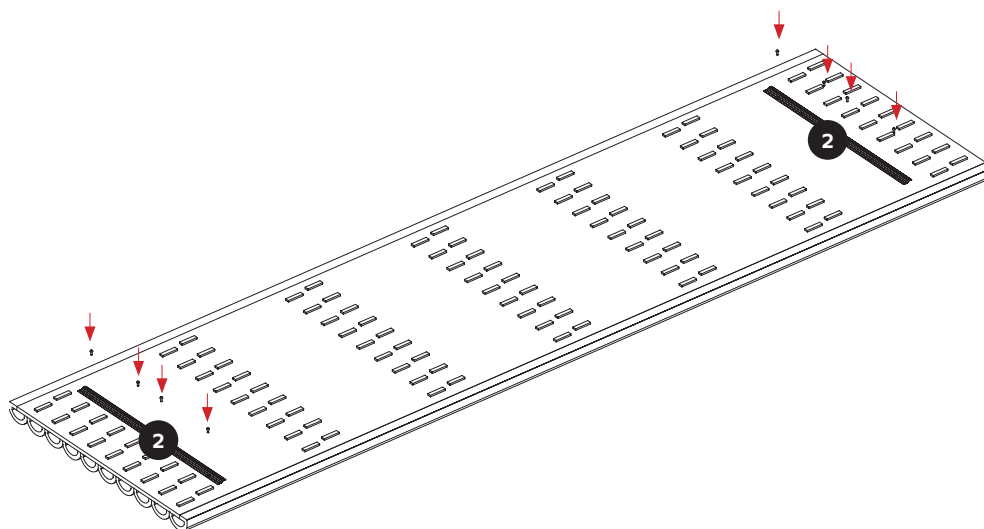

Palladio panels can be adjusted on site using standard tools like a utility knife, a crown drill (hole saw) or a circular saw. The cuts should be done along the fluting module. **Cutting the panel will release the fluting element from the slot - please use HOT GLUE to secure the open edge of the panel if you decide to cut it.** The aluminium profiles can also be trimmed using a power saw with a steel blade or an angle grinder.

Online Video Available

2 Install Z-Clip profiles on the back of the panel.

Install at least 2 profiles on the back of the panel using 3.9x11mm T15 Screws. If required, profiles can be cut on site using a metal blade jig saw or blade saw.

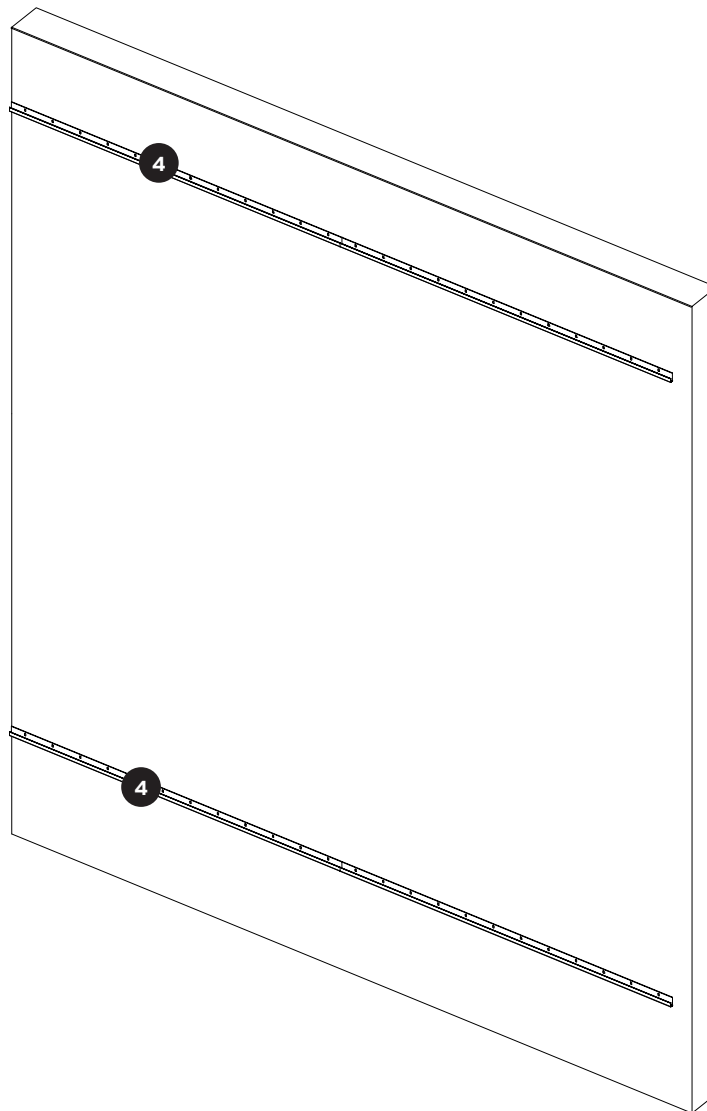

PALLADIO volumetric Wall Covering

Installation Overview

1 Install **optional** wall mounting profiles on the wall.

Aluminium Wall Mount Profiles (4) should be installed on the wall using appropriate mounting hardware (screws, expansions plugs, bolts) which needs to be selected according to the wall type. **These are not included in the scope of the delivery.** We recommend using 2 rows on the mounting profiles. Spacing should be aligned with the Z-clip profiles spacing installed on the back of the panel in the previous step.

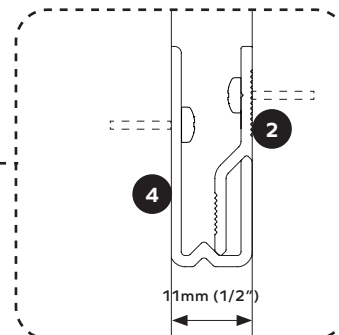

PALLADIO volumetric Wall Covering

Installation Overview

2 Hang the Palladio panels onto pre-installed wall mount profiles.

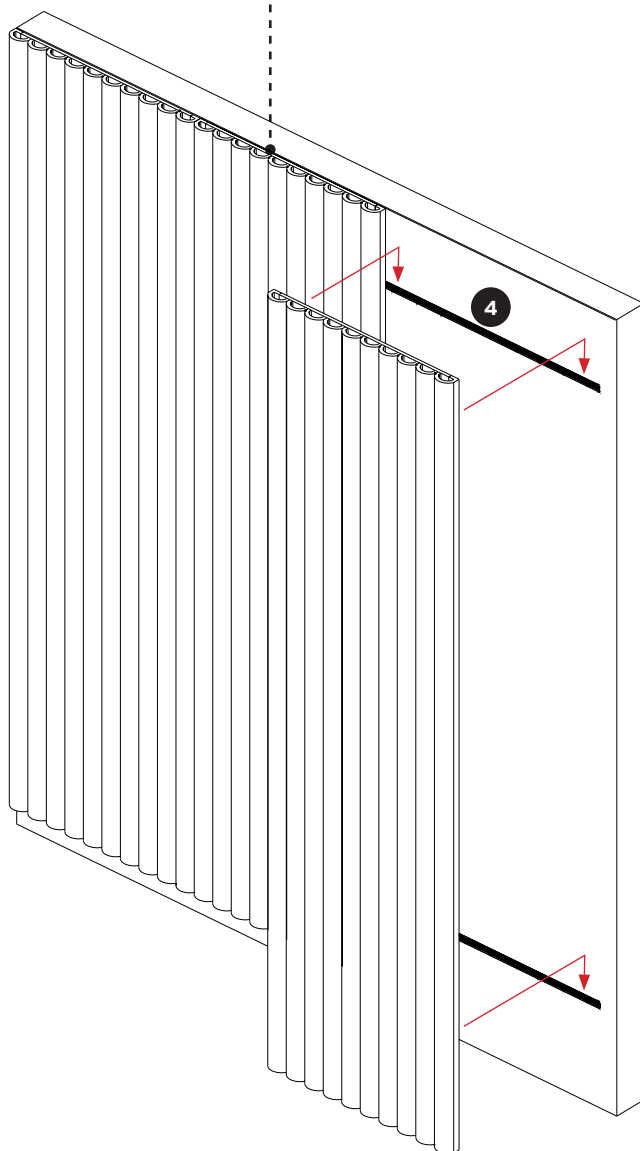

Z-Clip aluminium profiles can be used for dry wall installation. The same profiles need to be installed at the wall and the back of the panel. Profiles will slide into each other creating reliable mount. Profiles can be cut on site to match assembly width.

- 2 938.12.20.000.00.CUT Mounting Z-Clip 600mm

OPTIONAL ITEM

- 4 C00091 Aluminium Wall Mount Profile.
